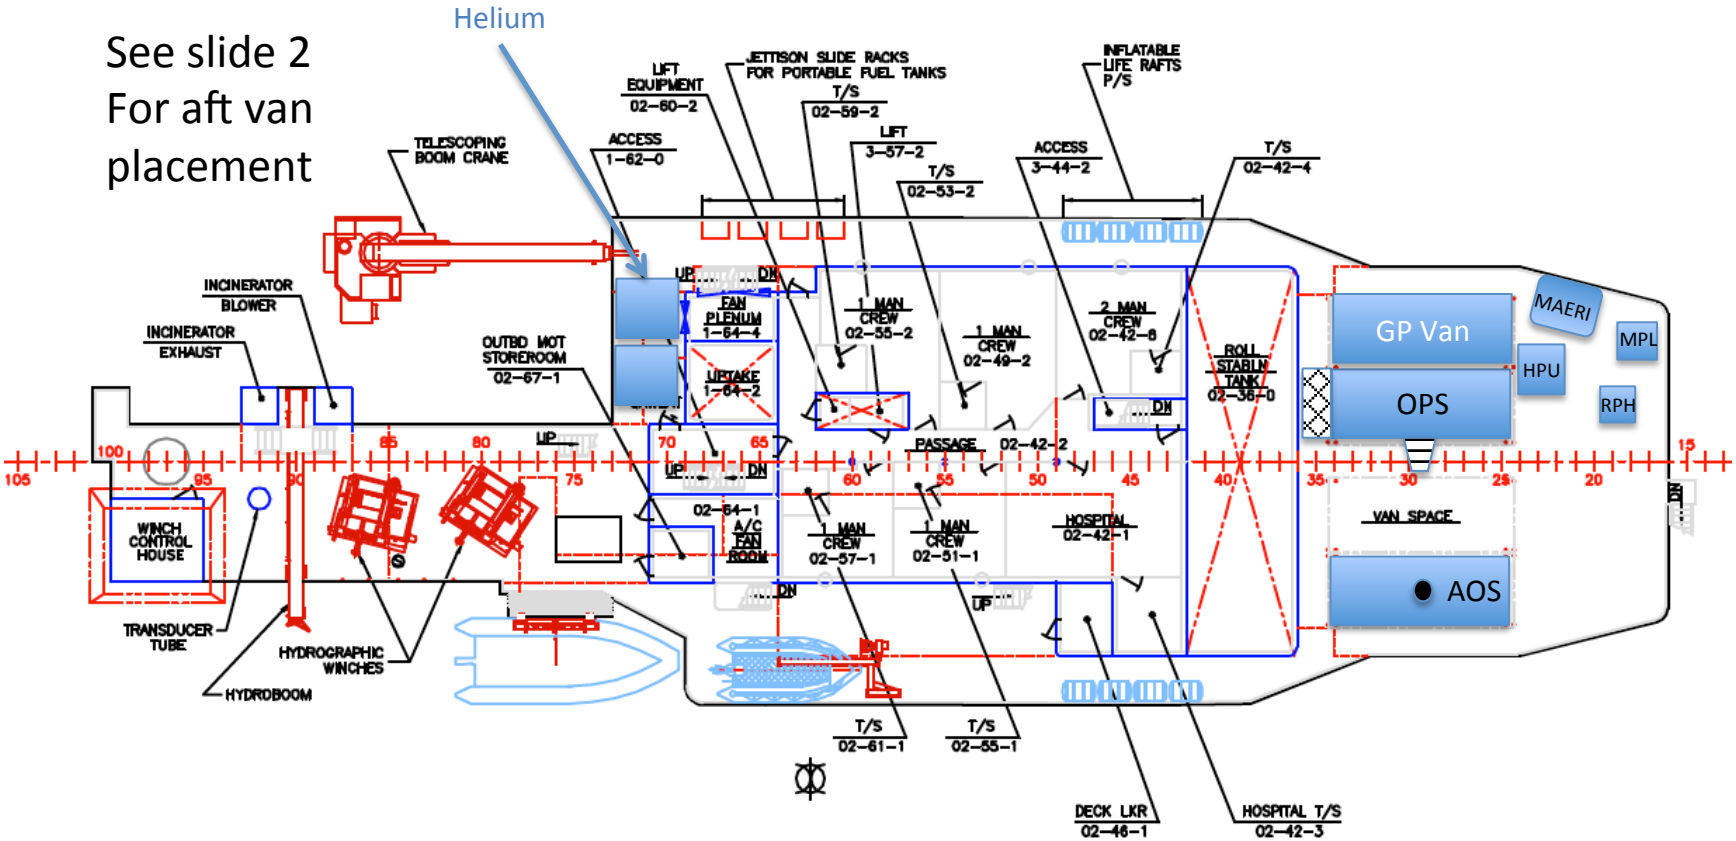
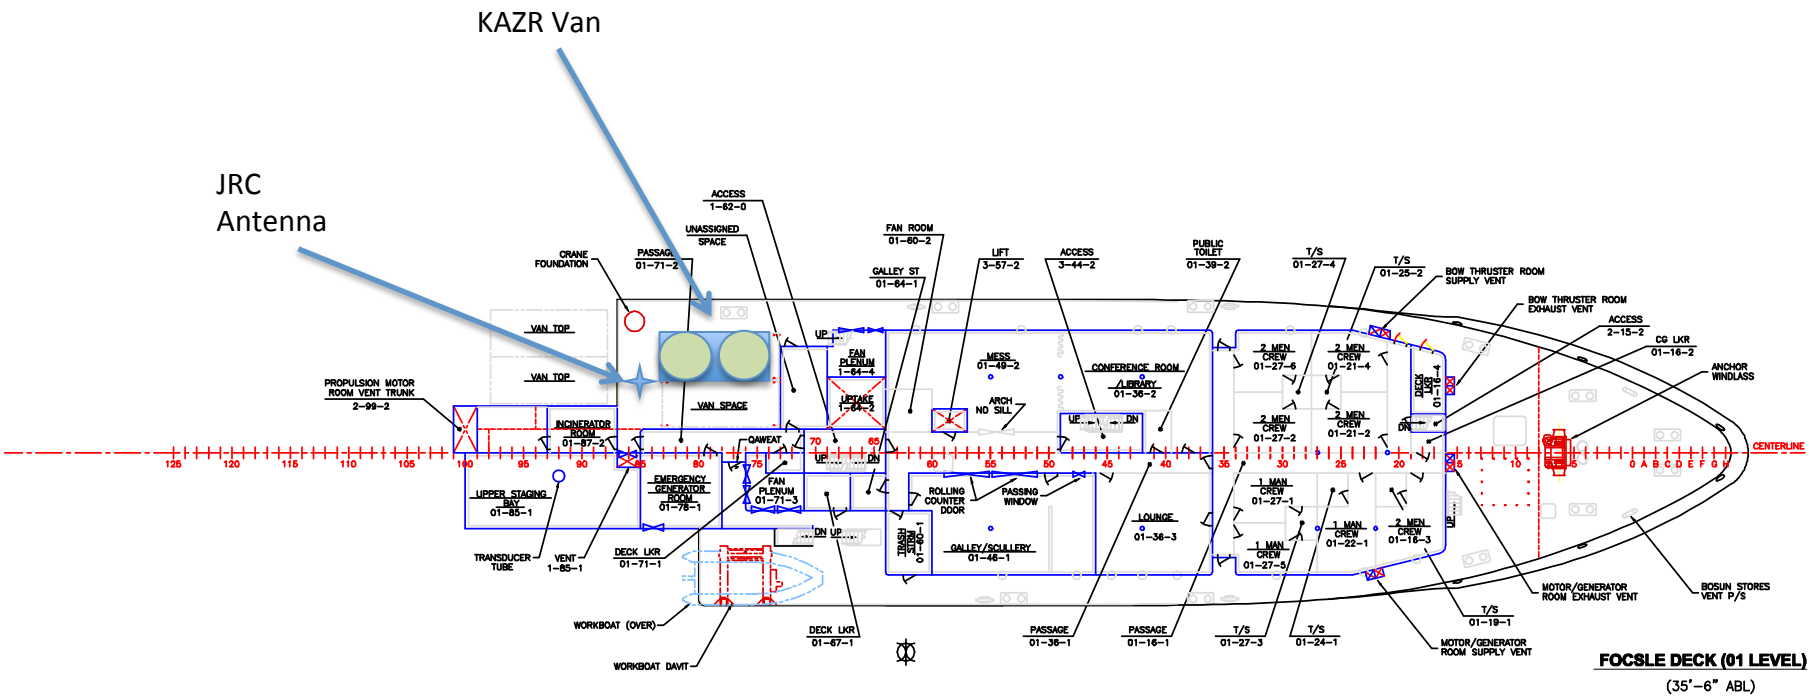
Deployment Scenario

See slide 2
For aft van
placement

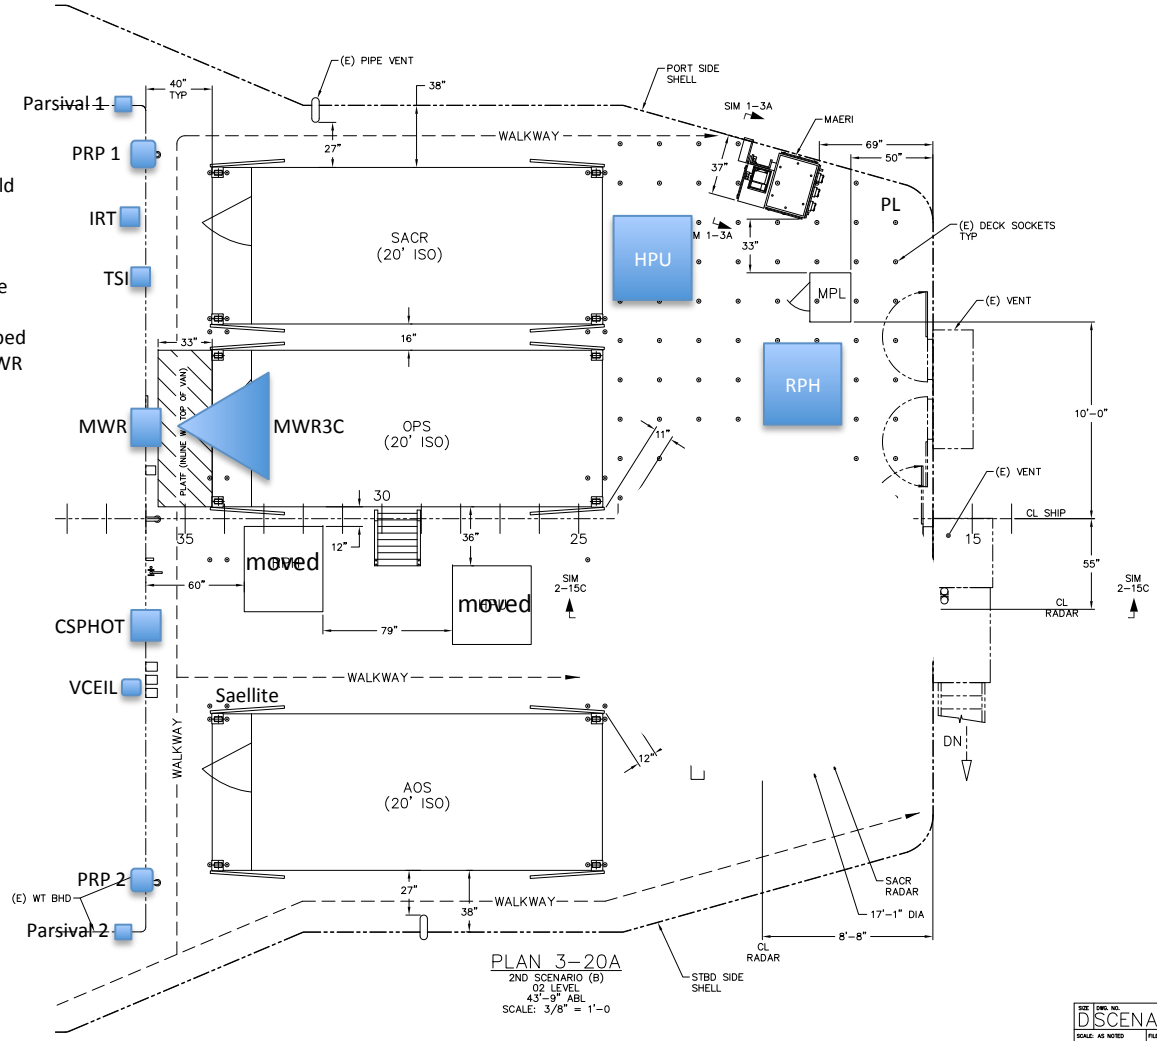


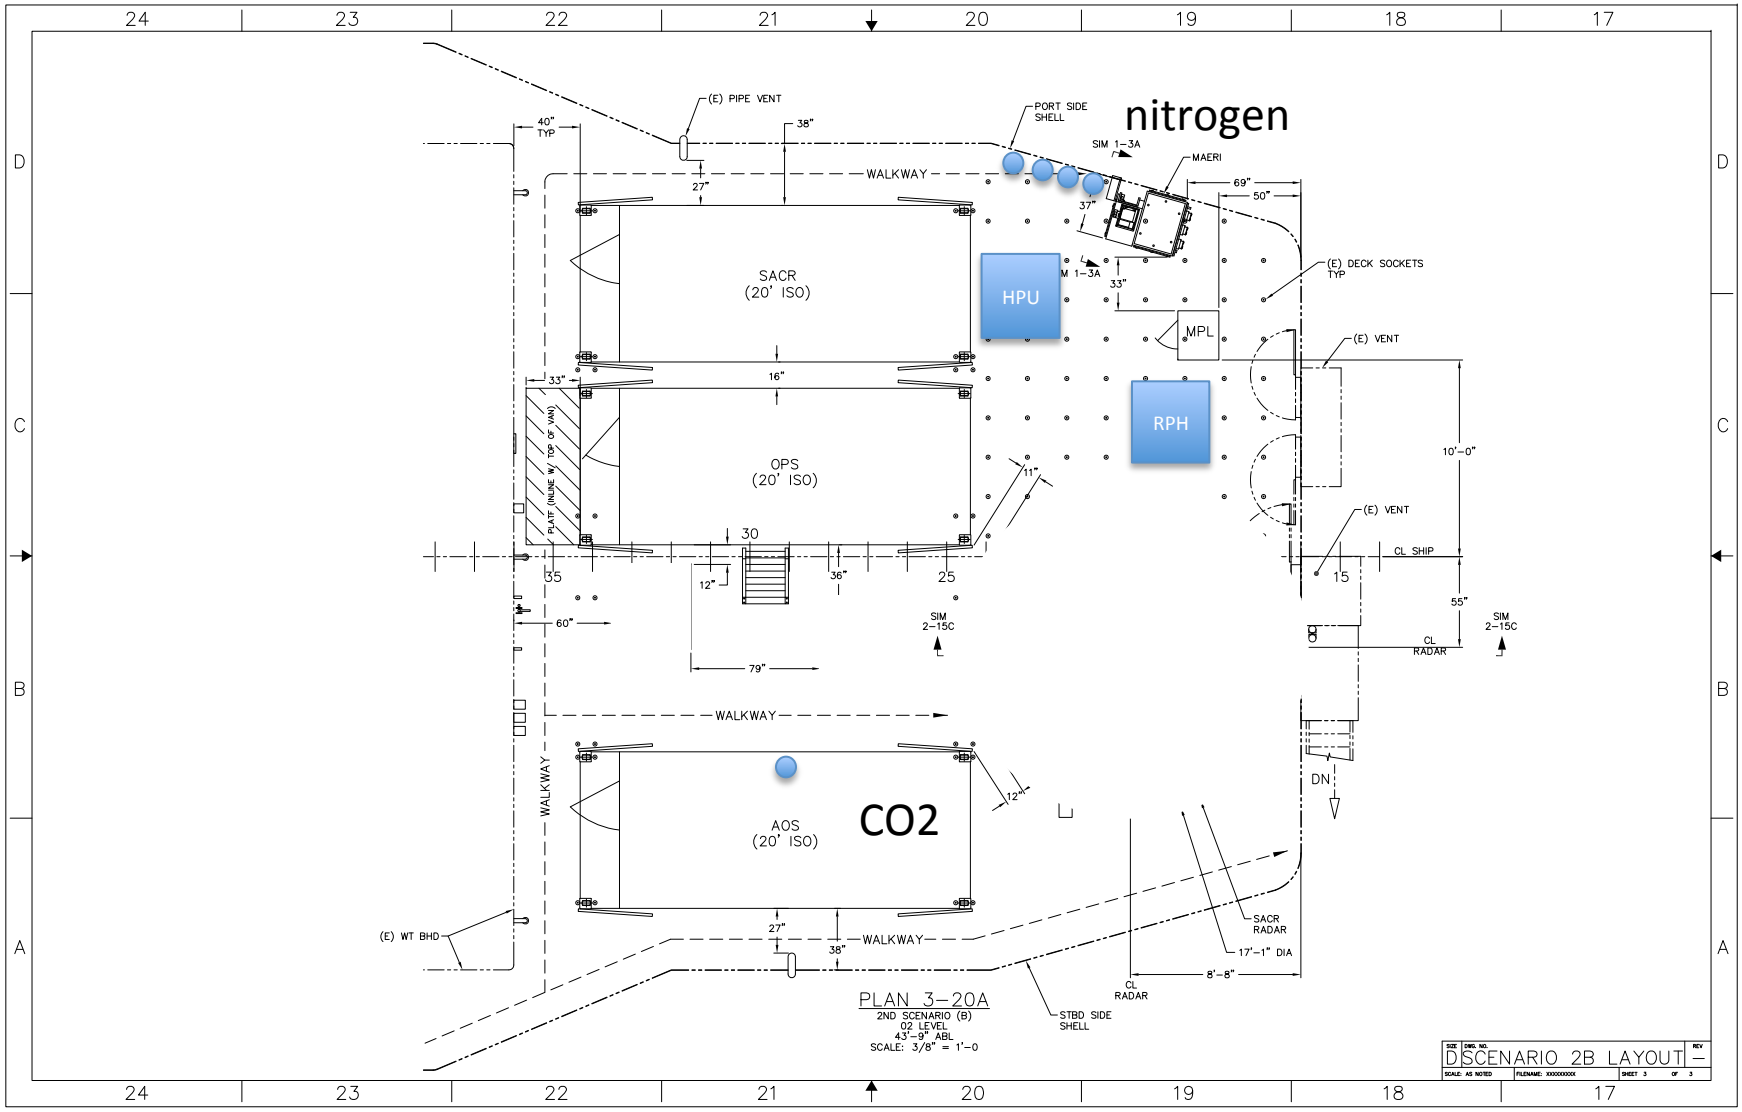
AFT Container Placement



Sensor Placement O3 Deck

Near Parsival 1 is ship ORG.
We may need to adjust location
At time of deployment. Want to
Include a few extra feet of cable.
IRT mounted below top rail as is the
VCEIL. These won't be in field of view
Of other instruments.
TSI, MWR and CSPHOT could block field
Of view of one another so trying to
Spread apart as much as possible.
Parsivals can be mounted to be lower
Than PRP so the radiometers don't see
Them. AOS stack and will be in
Field of view of PRP2 but can't be helped
MWR3C will be slightly lower than MWR





Compressed Gas Forward Location
